

### ***Resizable-BAR VBIOS Release Notice***

Please run the “VGA\_BIOS\_Upgrade\_xxx.exe” setup file under Windows.

Please note:

Resizable BAR is an advanced PCI Express feature that enables the CPU to access the entire GPU frame buffer at once, improving performance in many games. Because Resizable BAR is a system feature, both the GPU VBIOS and the motherboard SBIOS need to support this feature to realize large frame buffer allocation.

To avoid potential no display on boot, motherboard SBIOS must meet the following conditions prior to enabling resizable BAR feature:

- 1) Boot in UEFI mode
- 2) 4GB decoding enabled
- 3) Resizable BAR support enabled

If any question, please feel free to contact our technical support team for further assistance.
